Brandon Odom

AI Automation Engineer · Agentic Systems · Founder

Dallas, TX brandon.niles.odom@gmail.com github.com/bodom45 area51hq.vercel.app

SUMMARY

I've spent years building automation and now design, ship and run AI systems in production. They include a platform used by several separate organizations, Claude agents that use live tools, and scheduled pipelines that run with no one watching them. I run each one end to end, from database design and API integrations to deploys, cost limits and failure recovery, and they handle real business work every day at Creative Music Television and Area 51 Radio.

EXPERIENCE

Founder & Lead Automation Engineer — Dallas, TX

Creative Music Television (CTV) · Area 51 Radio

- **Orbit, AI outreach platform:** built software for several organizations, each seeing only its own data, on Supabase (24 tables with access rules and 19 edge functions). It scrapes leads, sends personalized DMs from a queue that checks for duplicates and retries, and uses a Claude agent that reads and answers replies. A model rewrites the outreach copy every week. It manages 2,584 leads and 31k+ industry contacts.
- **The Captain's HQ, Claude operations console:** a Next.js app where Claude uses live tools, streams its answers and keeps business context on hand with prompt caching, under hourly and monthly usage limits. A job rebuilds its context, runs 77 tests and redeploys every morning.
- **CMW Autopost:** a pipeline on scheduled GitHub Actions jobs that has published 260+ Instagram Reels and YouTube Shorts from a 350-clip library. It runs every hour, retries when the platform reports temporary errors, keeps a record of posts so nothing goes out twice, and needs no servers.
- **The Motion Hub:** a music marketing app for artists, built with Next.js and Prisma (28 data models, 53 API routes). It includes Stripe credit packs and subscriptions, connects to OpenAI, HeyGen, Spotify, TikTok and Meta, and runs scheduled jobs that tune ad campaigns.
- **Grant Radar:** scores grant opportunities against the company's profile across 8 weighted categories, explains each score, and drafts the start of each application.
- Lead a production team and a paid media internship program. Our content has reached 1M+ organic views.

AI & AGENTS

Claude API: tool use, streaming, prompt caching

Switching between Claude and GPT models

AI agents that answer messages

Automated prompt and copy improvement

ENGINEERING

TypeScript, React, Next.js

Python, Node.js

Supabase, Postgres, Prisma

Edge functions, queues, retries

GitHub Actions, Vercel, scheduled jobs

INTEGRATIONS

Meta Graph and Instagram APIs

YouTube Data API, Google sign-in (OAuth)

Stripe, Spotify, TikTok

Apify, Resend, HeyGen
